**MODEL CLS1**

**CAPACITANCE LEVEL SWITCH**

For Solids, Liquids or Slurries, Fail-Safe Protection, <1 pF Sensitivity

The Model CLS1 Capacitance Level Switch provides reliable point level measurement of solids, liquids and slurries in metallic or non-metallic tanks and vessels. It detects the presence or absence of material in contact with the probe by sensing a change in the capacitance.

**FEATURES/BENEFITS**

- Electronics provide highly sensitive measurement detection (requires less than a 1 picofarad shift from ambient)
- State of the art technology ignores material build-up on the vessel sidewall or along the probe assembly
- One time calibration is simple with a single multi-turn potentiometer
- Red LED on housing indicates sensor status
- Adjustable 1-30 second time delay and a 5 A, SPDT fail-safe relay output
- Added installation flexibility with vertically or horizontally mounting

**APPLICATIONS**

- High or low level detection
- Bins
- Silos
- Tanks
- Hoppers
- Chutes

**MODEL VRLS | PROXIMITY® BY DWYER**

**VIBRATING ROD LEVEL SWITCH**

Economical, No Material Build Up, For Powder or Bulk Solids

The Model VRLS Vibrating Rod Level Switch is economical choice in level detection of powders and bulk solids. The VRLS incorporates a piezoelectric crystal that vibrates the rod at its natural frequency, when contact material is present it dampens the vibrations and the switch changes state.

**FEATURES/BENEFITS**

- Probe design allows for self-cleaning, ensuring no build-up or bridging of material and accurate detection
- No mechanical moving parts with no routine maintenance required
- Sensitivity is adjustable for detection ranging from large granular material to small powders with low bulk densities.
- The failsafe mode can be set for failure on high level or failure on low level using a selector switch in the enclosure
- Unaffected by the dielectric constant of the sensed material, making it superior to a capacitance level switch for applications where the dielectric constant is too low, where there is more than one material being used in one vessel, and when material moisture content can change
- Ideal for applications where the bulk density is too low for a rotating paddle level switch

**APPLICATIONS**

- Pulp and paper processing
- Mining
- Food and beverage
- Silos
- Hoppers
